### Low Frequency Resonance Technology

#### Activate the body of water as small molecule water

The viscosity is reduced by 400 times, the absorption speed is increased by 3 times, and the cell water capacity is increased by 2 times. At present, the best small molecule water in nature is hexagonal water. It has the structure of six water molecules and the low-frequency water is a linear single-molecule water, which has the same structure as the water in human cells.

#### Implant special frequency information in the water body

Specific frequency information has anti-bacterial, anti-viral, anti-mushroom and anti-cell mutation effects. Rewrite the harmful magnetic information of water molecules, enhance communication between cells, and expel toxins from the body.

After molecular resonance, the water molecule becomes a stronger hydrogen bond because the hydrogen bond is obviously widened by about 10 degrees, which will increase the energy of the water and more easily neutralize the malignant free radicals in the body (such as  $H^+$ ,  $OH^-$ ,  $Ca^{2+}$ ,  $Mg^{2+}$ ) It can balance the pH of the body.

### Magical Energy Low Frequency Resonance Water Drink a good glass of water for health

- Cell replenishment speed is increased by 3 times, and the absorption rate is over 90%
- Inhibit harmful bacteria and tumor cells
- Has a significant effect on promoting the growth of white blood cells
- Increase cell oxygen content and improve cell health index
- Powerful anti-oxidation and anti-radiation effects, enhance the body's detoxification function
- Adjust the pH of the human body to balance
- Improve blood viscosity and reduce the incidence of cardiovascular and cerebrovascular diseases
- Strong bactericidal effect, enhance body immunity
- Promote the health index of the intestinal flora
